Task 1. Will the conversion to BCNF be dependency preserving in any case? Proof your statement and give a reasoning for choosing BCNF design.

Answer: Yes , it will be be dependency. Other column will depend on PK. For Example

ID	Name
23984406	Olzhas
49585935	Kuanish

Name will depend to ID. If it won't we do not find the info.

Task 2. Given table in 1NF, convert to 3NF if PK is UnitID:

TASK TABLE

UnitID	StudentID	Date	TutorID	Topic	Room	Grade	Book	TutEmail

Task 3. Given table in 1NF, convert to 2NF if PK is {ProjectName, ProjectManager}, use decomposition:

TASK:

ProjectName	ProjectManager	Position	Budget	TeamSize
Project1	Manager1	CTO	1 kk \$	15
Project2	Manager2	CTO2	1.5 kk \$	12

ANSWER:
PROJECT_NAME:

ProjectName	ProjectManager	Position	Budget
Project1	Manager1	CTO	1 kk \$
Project2	Manager2	CTO2	1.5 kk \$

PROJECT_MANAGER:

ProjectManager	TeamSize
Manager1	15
Manager2	12

Task 4. Given table, convert to 3NF if PK is Group, use decomposition:

Faculties have a number of specialities, each speciality consists of a set of particular groups.

*Faculty-> speciality
Speciality -> group*

<u>Group</u>	Faculty	Speciality
g1	f1	s1
g2	f2	s2

SPEC_PODRAZDEL

Speciality	Group
s1	g1
s2	g2

FAC_SPEC

Faculty	Speciality
f1	s1
f2	s2

Task 5. Given table, convert to BCNF if PK is {ProjectID, Department}, use decomposition:

Curator depends on projectID and related departments, teamSize directly relates to project and related departments, ProjectGroupsNumber depends on TeamSize.

projectID->curator
Teamsz->ProjGroNumb

TASK

<u>ProjectID</u>	<u>Departmen t</u>	Curator	TeamSize	ProjectGroupsNu mber
p1	d1	e1	100	5
p2	d2	e2	120	6

<u>ProjectID</u>	<u>Departmen t</u>	Curator
p1	d1	e1
p2	d2	e2

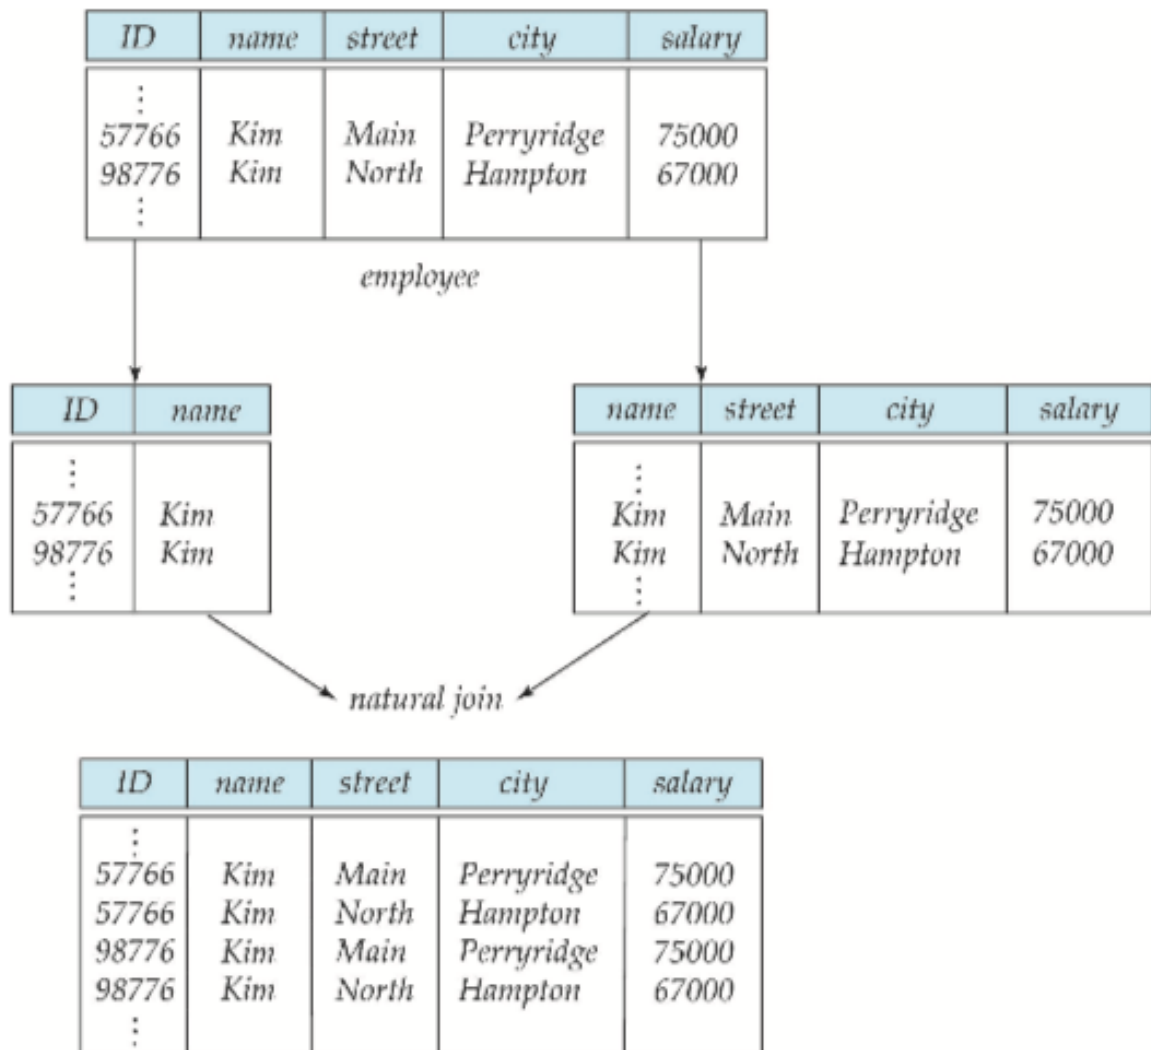

TEAM

Curator	TeamSize	ProjectGroupsNu mber
e1	100	5

Task 6. List the three design goals for relational databases, and explain why each is desirable. Give an example of both desirable and undesirable types of decompositions.

- 1. to generate a set of schemas that allow us to Store information without unnecessary redundancy.**
- 2. Retrieve information easily and accurately**
- 3. to provide an environment that is both convenient and efficient to use in retrieving and storing data base information.**

This example of Bad decomposition(below), it also named LOSSY DECOMPOSITION, it will provide redundancy.

This is Good decomposition(below), it also named LOSSLESS DECOMPOSITION:
